

German Pea Dot Camo

CRT

I'm going to paint a German "pea dot" camouflage pant using Vallejo's Model Color acrylic paints. Add a small amount of Tamiya "flat base" (Ref. X-21) to each of the shades to achieve a totally matte finish.

I apply several coats of base color until the finish is completely uniform. I let each coat dry before applying the next.

I start the camouflage pattern by drawing, with a sand color, the lighter spots. I use a good quality brush with the tip in good condition.

With the base color I paint a few small spots inside the large light spots.

Now I draw the darker green spots. I place a few dots of this color inside the larger light spots.

German Pea Dot Camo

CRT

Inside the darker big spots I draw smaller ones. I use the base color and sand color from the previous steps.

Now I paint the spots light green.

I draw a few small spots within the larger light green spots. I use the base colors, sand and dark green above.

I apply a general wash with very diluted chocolate brown. This helps us to integrate all the colors of the camouflage.

CRT

I apply several layers in the shadow areas using the same shade from the previous step.

In the light areas I recover, spot by spot, the original tones (base, sand, dark green and light green).

With a very dark color I outline the inside of the seams.

I outline, using a very light color, the areas of the seams most exposed to light.
